## Installation

---

Before installing the extension, please make sure to **Backup your web directory and store database**

You will require to install MageDelight Base Extension first. If it is not installed then please download it from <https://www.magedelight.com/pub/extensions/magedelight-base.zip> and unzip the package file into the root folder of your Magento 2 installation.

Root Directory is - "**app/code/magedelight/#YourExtensionName#**"

- Unzip the extension package file into the root folder of your Magento 2 installation.
- Connect to SSH console of your server:
  - Navigate to the root folder of your Magento 2 setup
  - Run command as per below sequence,

```
php bin/magento setup:upgrade
```

```
php bin/magento setup:di:compile
```

```
php bin/magento setup:static-content:deploy
```

```
php bin/magento cache:clean
```

- log out from the backend and log in again

If you are using Magento 2.3 or later then you do not need to activate license. Extension will be activated with silent activation mechanism and does not require activation keys to be entered manually.

## Backend Configuration (Admin side)

### General Configuration

Enable Megamenu

[store view]

Yes

Enable Hamburger Menu For  
Categories

[store view]

Yes

Select Primary Menu

[store view]

Menu

Animation Time

[store view]

0.7

Enter the default animation time in seconds.

1. **Enable Mega menu:** Enable/disable the mega menu extension.
2. **Enable Hamburger Menu For Categories:** Select "Yes" to enable Hamburger Menu.
3. **Select Primary Menu:** Selected primary menu would get displayed at the place of default menu of Magento store (this will override the default menu).
4. **Animation Time:** Enter time in seconds for all animation type selected for each mega menu.

### Logs Settings

Enable Logs

[global]

Yes

Logs are saved in var/log/md\_megamenu.log

1. **Enable Logs:** Logs keep details of errors (if anything goes wrong while creating menu or menu items then details of error would be displayed under logs).

Logs is meant for developers only.

## Import Sample Data

Mega Menu >> Sample Import

### Mega Menu

Override Existing Data

Yes

If the identifiers of the static blocks and menus are already exist, you can set to "Yes", then click on "Import" button.

Import Data

Import

- Click on **Import** button, if you want to import sample data for Mega Menu.

## Backend Functionality

### Manage Mega menu

								Add New Menu
Search by keyword				Filters	Default View	Columns	Export	
Actions	5 records found		20 per page		< 1 of 1			
<input type="checkbox"/>	ID	Title	Menu Type	Status	Store View	Created	Modified	Action
<input type="checkbox"/>	9	Mega	NORMAL MENU	Disabled	All Store Views	May 10, 2017 9:35:17 AM	May 10, 2017 12:16:47 PM	Select
<input type="checkbox"/>	10	Horizontal Menu	MEGA MENU	Enabled	All Store Views	May 10, 2017 9:37:17 AM	May 10, 2017 12:19:10 PM	Select
<input type="checkbox"/>	11	Vertical Left Menu	MEGA MENU	Enabled	All Store Views	May 10, 2017 9:37:17 AM	May 10, 2017 12:02:15 PM	Select
<input type="checkbox"/>	12	Vertical Right Menu	MEGA MENU	Enabled	All Store Views	May 10, 2017 9:37:17 AM	May 10, 2017 9:37:17 AM	Select
<input type="checkbox"/>	14	Mega Menu	MEGA MENU	Enabled	All Store Views	May 10, 2017 9:44:10 AM	May 10, 2017 9:44:10 AM	Select

In Magento admin, Select Mega menu tab (from side panel) which will display all the menus created from Mega menu extension.

- Title:** Name of the menu.
- Menu Type:** There are two types of menu.
  - Mega menu
  - Normal menu
- Status:** Status for a particular menu. Only enabled menu will be shown in the frontend.
- Store View:** Store view shows the stores selected for a particular menu. Means that menu will only be visible in the store for which it is selected.
- Created:** Displays the date when menu is created.
- Modified:** Displays the date when menu is modified.

### Create New Menu

Menu
Menu Items

Enable Menu
☒ Yes

Menu Title \*

Default Store View

Shortcode

```
{{block class="Magedelight\Megamenu\Block\ShortcodeMenu" template="Magedelight_Megamenu::menu.
```

(Paste this code in your CMS page or static blocks)

- **Enable Menu:** Enable/disable the menu.
- **Menu Title:** Set the menu title.
- **Menu Style:** This is a text area field which saves the in page CSS. It will be applicable only to Mega menu type menu. This is very useful if someone wants modification in mega menu style without editing any core files.
- **Customer Groups:** Allow selected customer groups to access the mega menu.
- **Menu Type:** There are two types of menu.
  - Mega menu (has various configuration options)
  - Normal menu (is similar to default Magento menu)
- **Menu Design Type:** Select design type from available options.
  - Horizontal Menu

- Vertical Left
- Vertical Right
- Drilldown (each menu item can be expanded and collapsed)
- **Is Sticky:** Enable to scroll down menu with page scroll.
- **Store View:** Multiple stores can be selected from here. The menu will be displayed in that particular menu. If default is selected the menu can be displayed in all the stores.
- **Shortcode:** Value of the field would get generated automatically on saving the menu. Place the generated code in CMS page or static block to display created menu.

Except primary menu, shortcode is required for all menus to get displayed on the frontend. Hence, copy and paste the shortcode of desired menu in the CMS page or static blocks where you want to display the menu.

## Menu Item

After saving menu, one more tab ("Menu Item") will be displayed beside "Menu" which is used to create Menu items. Menu items can be created in 4 different ways.

1. **Mega Menu Block:** When we add menu items in mega menu block and click on add to menu, it creates a menu item as shown below. This option will be only enabled when current menu type is mega menu.

The options specified in menu block are as follows.

- **Label:** It displays label name for menu item.
- **Class:** Add multiple classes to menu items on front end.
- **Preceding Label Content:** This option is used to add content before menu item on frontend. This is basically used to add font awesome icons. We can add font awesome icon code here.
- **Menu Columns:** There are maximum 5 columns supported now which is used to create columns from menu items for mega menu.
- **Multiple Columns:** This columns will appear after you will select menu columns from drop down menu. This contains static blocks and normal menus.. When we select any static block from the column that static block will get rendered on the frontend for the menu and same will appear for normal menus.
- **Show Title:** This option enables us to show hide title of normal menu (selected as menu items) on the frontend.

Show Title is used only when menu is selected for menu column. It is not meant for static block option for menu column.

2. **Category Block:** This option shows Magento Categories.

- **Class:** Add multiple classes to menu items on front end.

- **Preceding Label Content:** This option is used to add content before menu item on frontend. This is basically used to add font awesome icons. We can add font awesome icon code here.
3. **Page selection:** This option shows pages in Magento store.

- **Class:** Add multiple classes to menu items on front end.
  - **Preceding Label Content:** This option is used to add content before menu item on frontend. This is basically used to add font awesome icons. We can add font awesome icon code here.
4. **External Links:** This option adds external links to the mega menu.

- **Label:** It displays label name for menu item.
- **URL:** Enter URL of external page where item click should redirect the users.
- **Class:** Add multiple classes to menu items on front end.
- **Preceding Label Content:** This option is used to add content before menu item on frontend. This is basically used to add font awesome icons. We can add font awesome icon code here.

Click on categories from the dynamically displayed list with all sub categories. You can select which category to display in the mega menu. You can set customized class, preceding content, animation effects. It also provides you facility to set image at different places of menu block.

- **Class:** Add multiple classes to menu items on front end.
- **Preceding Label Content:** This option is used to add content before menu item on frontend. This is basically used to add font awesome icons. We can add font awesome icon code here.
- **Animation Fields:** Select animation effect for menu

- **Block:** Select block to display at header, left, right and bottom of the category menu

## Hamburger Menu

Calatog >> Categories >> Select sub-category >> Mega Menu (For Desktop Only)

### Mega Menu (For Desktop Only)

Number of Columns with Subcategories \*

1

If the value is 0, the number of columns equals to the number of child categories. The maximum is 4.
