## Installation

---

You will require to install MageDelight Base Extension first. If it is not installed then please download it from <https://www.magedelight.com/pub/extensions/magedelight-base.zip> and unzip the package file into the root folder of your Magento 2 installation.

Before installing the extension, please make sure to **Backup your web directory and store database**

You will require to install MageDelight Base Extension first. If it is not installed then please download it from <https://www.magedelight.com/pub/extensions/magedelight-base.zip> and unzip the package file into the root folder of your Magento 2 installation.

Root Directory is - "**app/code/magedelight/#YourExtensionName#**"

- Unzip the extension package file into the root folder of your Magento 2 installation.
- Connect to SSH console of your server:
  - Navigate to the root folder of your Magento 2 setup
  - Run command as per below sequence,

```
php bin/magento setup:upgrade
```

php bin/magento setup:di:compile

php bin/magento setup:static-content:deploy

php bin/magento cache:clean

- log out from the backend and log in again

If you are using Magento 2.3 or later then you do not need to activate license. Extension will be activated with silent activation mechanism and does not require activation keys to be entered manually.

## Backend Configuration (Admin side)

### CMS Configurations >> General Configurations

#### General Configuration

Enable Module  
[store view]

Yes

Default file format

CSV

Import Behavior

Import Behavior \*

Copy if exist

File to Import

Select File to Import \*

Choose File

No file chosen

File must be saved in UTF-8 encoding for proper import. only type csv,xml allowed

- When using a supported file format, a page can be imported using the "CMS Import Export >> Import >> Pages" menu option (CSV or XML). Please find supported configurations below,
  - Import Page Settings:**
    - CSV:** Select your file type with "CSV" to start import process.
    - XML:** Select your file type with "XML" to start import process.
  - Import Behavior:**
    - Copy if exist:** If another file with the same identifier already exists in the database, this import behavior for files will copy that file. This will generate another file with the prefix "copy-of-" added to it, as well as produce a new file.
    - Skip if exist:** The behavior of this file import will skip the file if another file with the same identifier already exists in the database. Nothing will be done with that file as a result of this action.
    - Replace if exist:** If a file with the same identification is already present in the database, the behavior of this file import will replace that file. The contents of the new file will be replaced with those of an existing file that has a matched identifier.
  - File to Import:** After the file has been uploaded, select the "Check Data" button from the top action bar. It will check that the data and file format are valid before importing them. If there are any errors, they will be displayed; otherwise, the "Import" button will be displayed so that the actual import can be processed.
